

# YACA

Yet another Calendar Application

Overview of screens + description of Sources

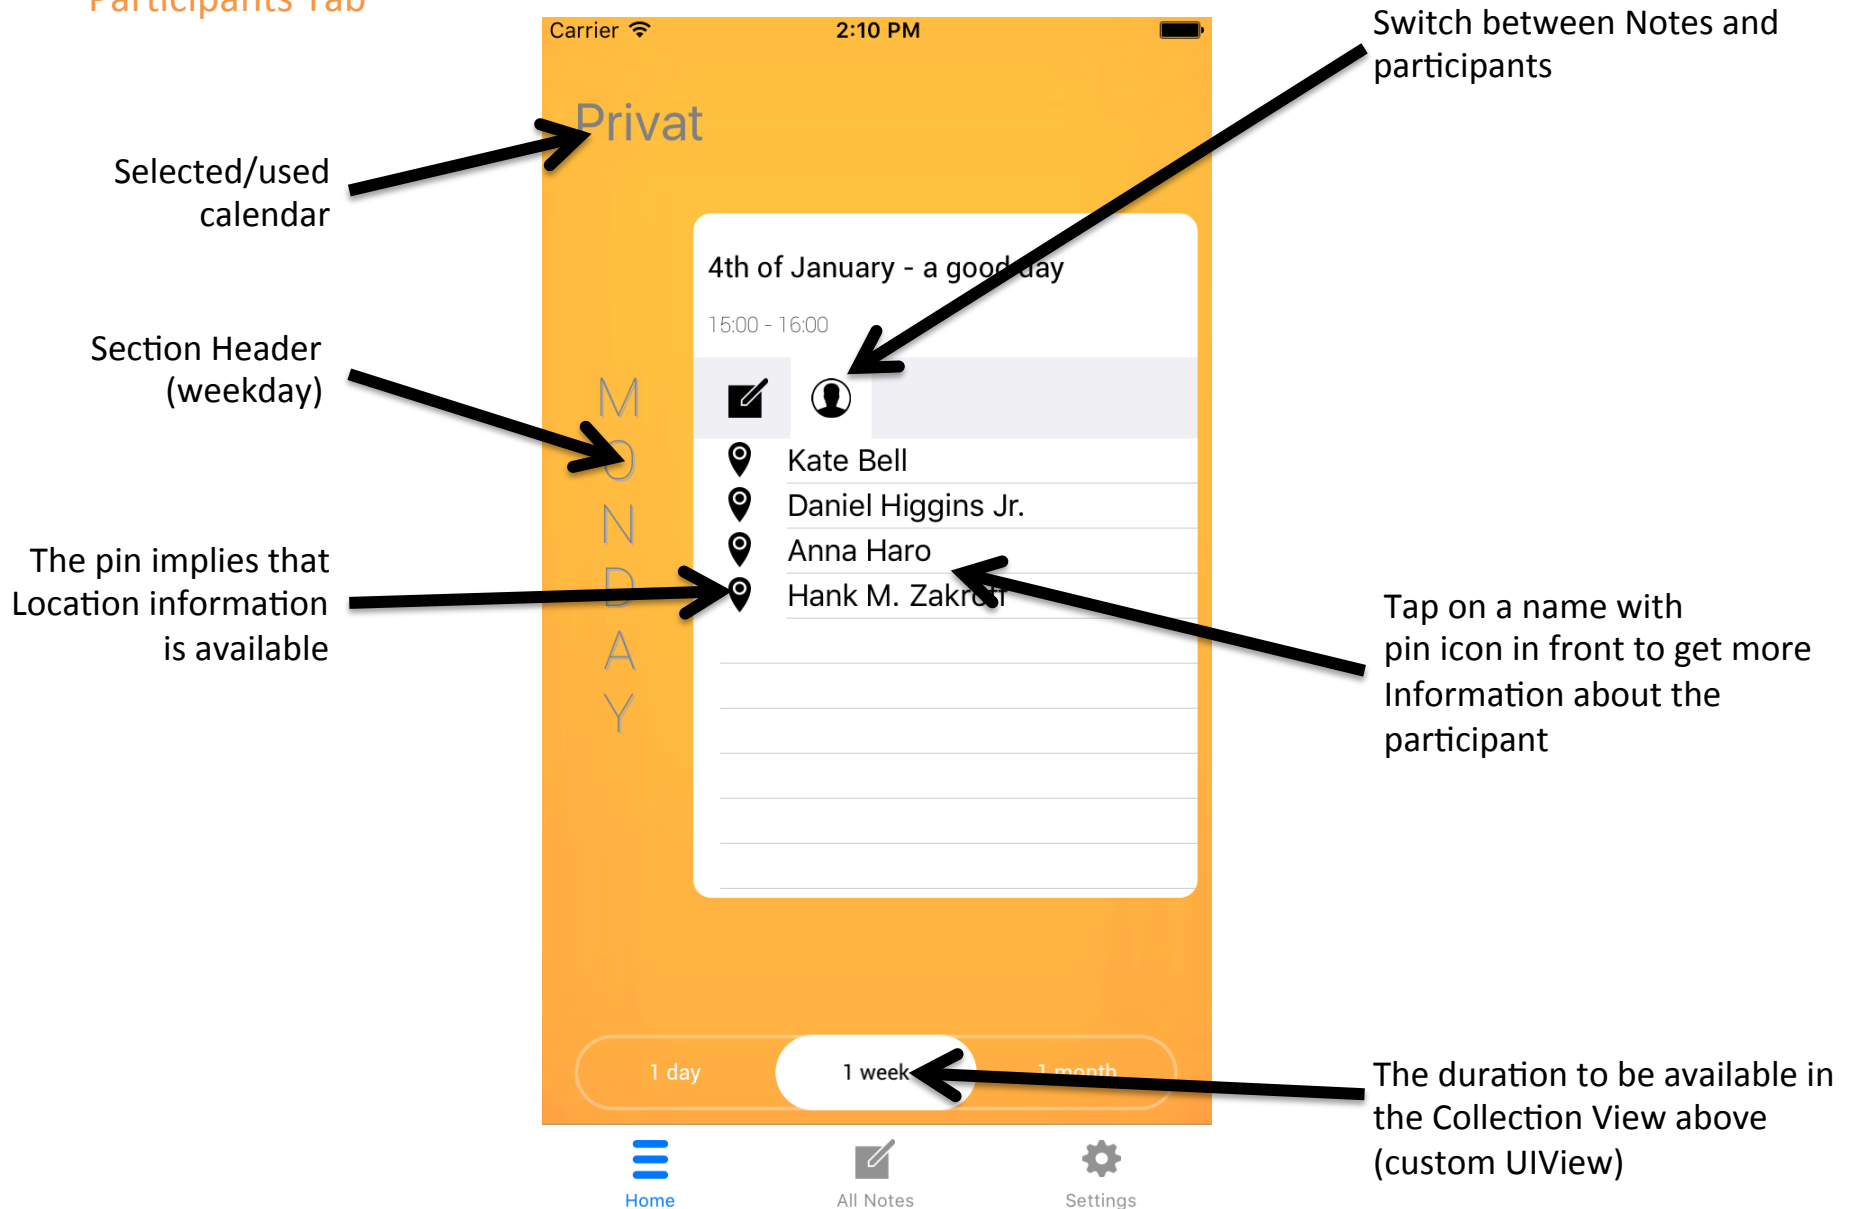

# First screen after first setup

## Notes Tab

# First screen after first setup

## Participants Tab

# Participant Overview

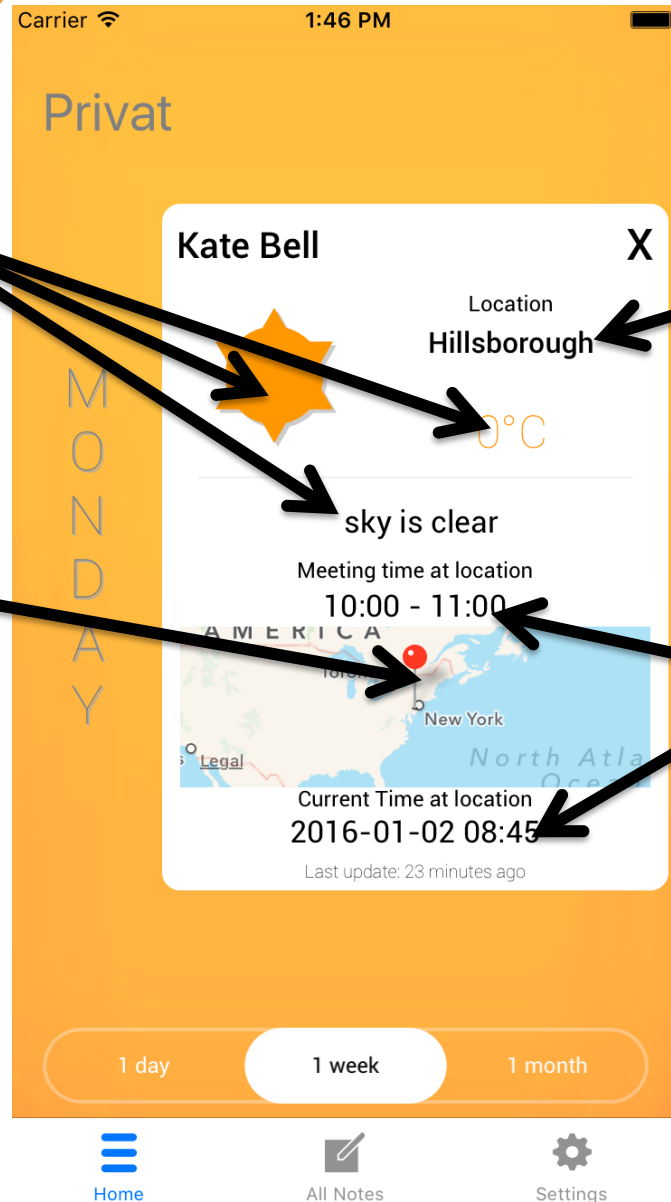

Where the data is coming from

Weather information  
using unit setting for  
Temperature retrieval

Showing location on  
map

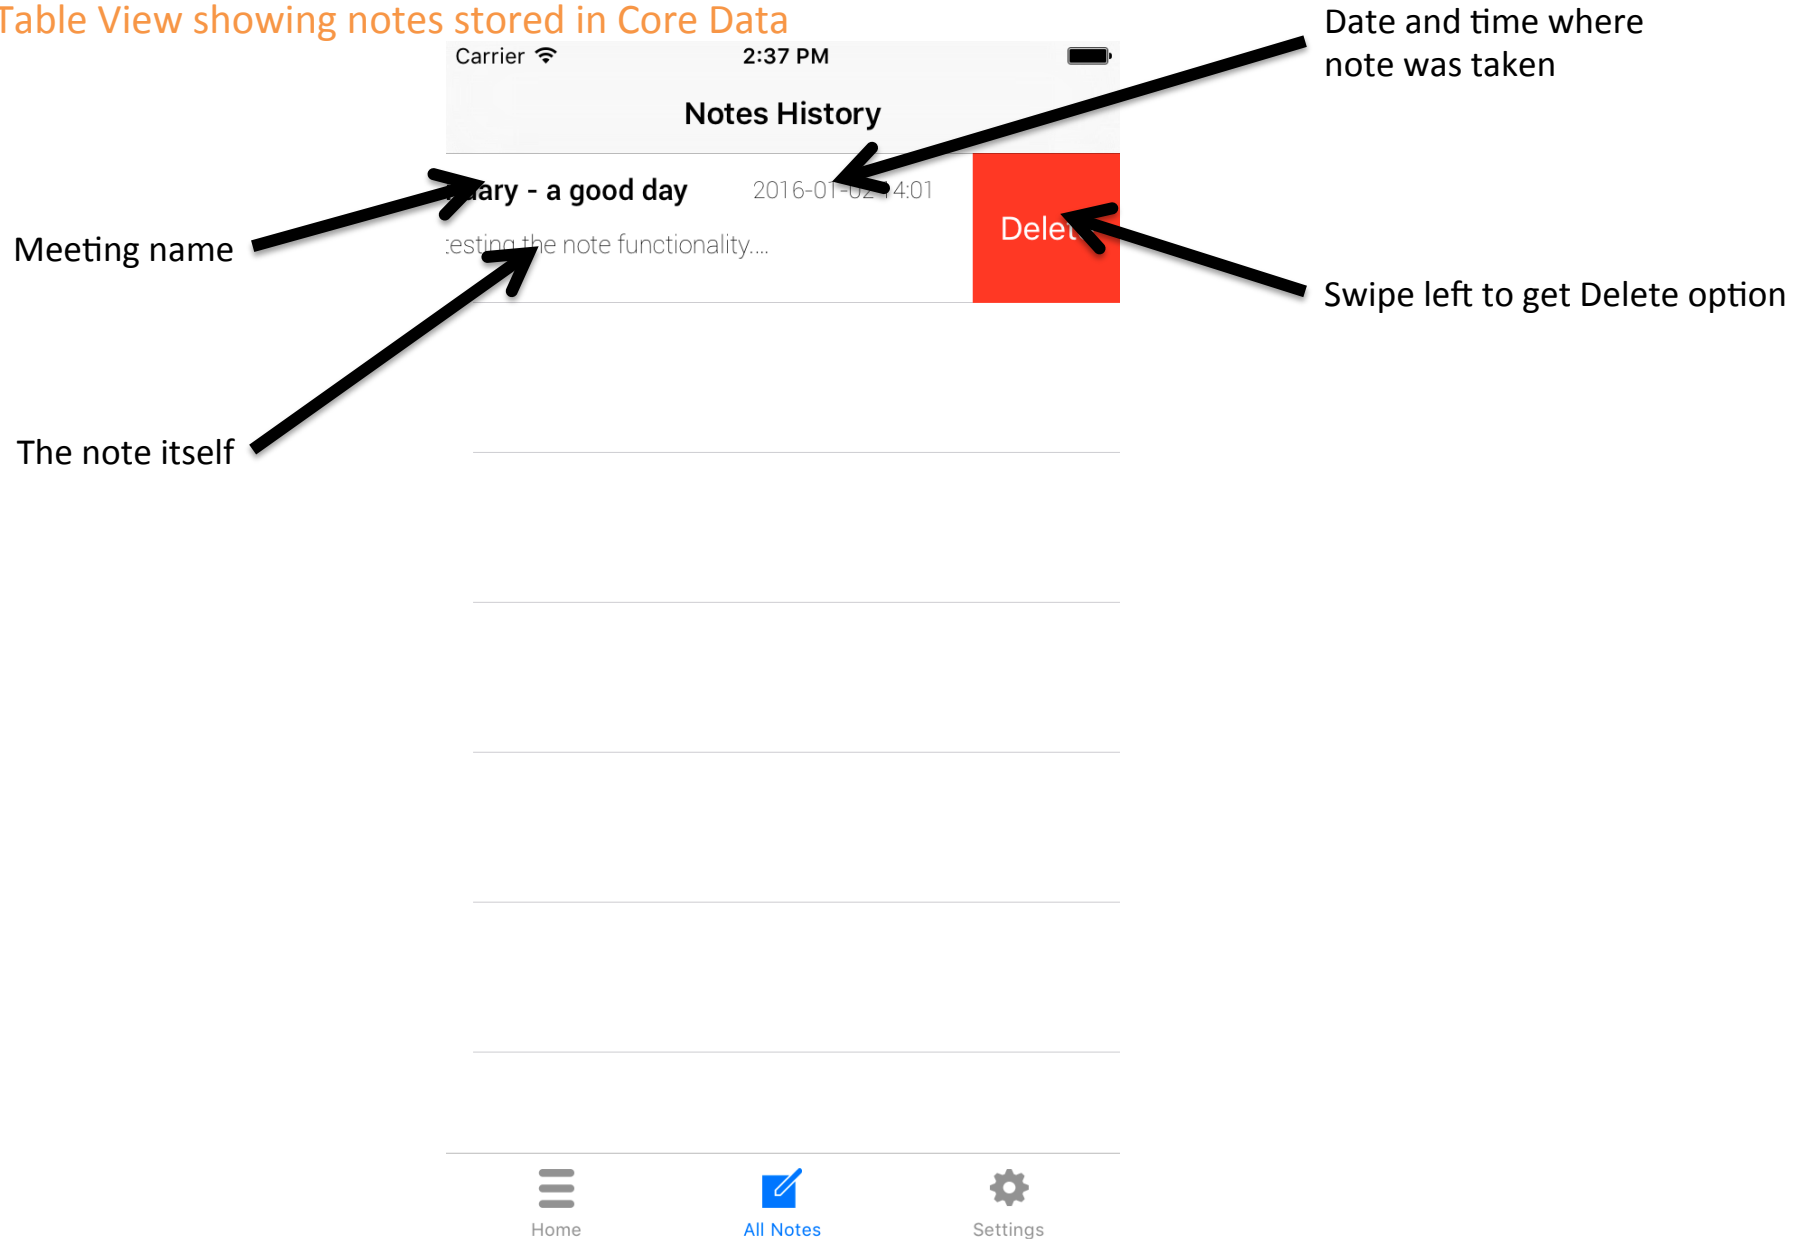

From local contacts

Time of Meeting as well as current  
Time in the respective timezone

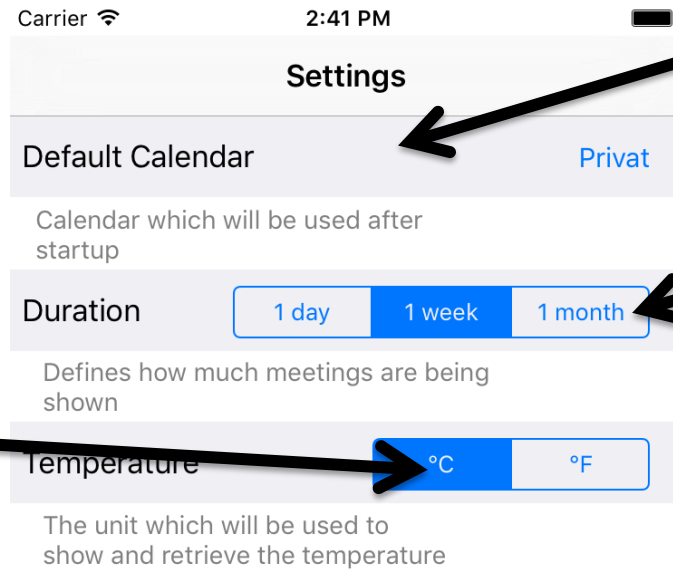

## Table View showing notes stored in Core Data

## Table View showing notes stored in Core Data

# Settings

Application Settings, stored in UserDefaults

Selected Calendar  
Opens a Picker for selection

This is redundant but initially  
designed in settings only  
Have kept it there

Temperature Unit to use  
Will be used in API call  
against openweather

# Sources

Where the data is coming from

openweather API

From local contacts

CLGeocoder  
Using contact  
Information

Offset from google timezone API
